

# feratel Digital Signage

## feratel DigitalSignage

Whether as an individual monitor or as multiple versions in a series, feratel gives you many options. feratel now also offers DigitalSignage for access portals.

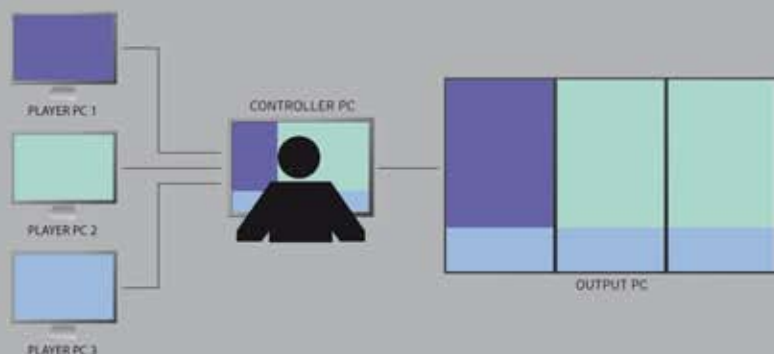

- > HD: 4078 x 768 pixels (version with 3 monitors)
- > Anti-glare protective glass with a UV filter
- > Good readability, even in direct sunlight
- > Brightness: 1500 cd/m<sup>2</sup> with high bright display
- > Integrated PC

## feratel and sitour offer comprehensive content for your broadcasts

You profit from simple integration of existing feratel and sitour content:

- > Live panorama pictures
- > Weather data
- > Ski lift and ski run information directly from the CPS
- > Animated PanoramaMap

## Network and schedule preparation

You choose the individualized content (e.g., a film or slideshow) and then decide when, where and how often you want to show the content

- > Automatic combining of individualized content
- > Quick program changes
- > Time controlled
  - Blend in content according to date (from/to)
  - Play content according to a precise time (e.g., live broadcast from the ski slopes)

## Options for channels

feratel provides software for split screen systems and integrates existing content. Split your screen space to best suit your needs.

## Communication at the highest level

With feratel DigitalSignage, content is king!

**Networked and audio visual information systems whose content can be quickly and easily controlled by a program or put together manually provide you with communication at the highest level. For this purpose, feratel provides you with exclusively selected high quality hardware and software products. You profit from many years of know-how and comprehensive feratel/sitour content.**

The software that is used is largely independent of content and screen formats and runs without any special hardware on conventional Windows PCs. feratel DigitalSignage software guarantees you maximum flexibility. With the unique feratel and sitour content, ski lift and ski run information are directly broadcast from the CPS (Computer Panorama System), as are live pictures from your panorama camera, weather data and

weather forecasts. Event tips are also carried in real time; additional film and advertising content round out this offering and provide your guests exciting and diverse information. Scrolling text and all types of news tickers from the Internet - all this comes easy with feratel DigitalSignage, as the system guarantees maximum flexibility in displaying various content. Whether it's a matter of split screens where you work with individual channels or coordinating several monitors, you have all kinds of presentation options. The content of feratel DigitalSignage solutions can also be quickly and easily integrated into the cable TV network via the Info Channel.

- > Screen splitting available on channel
- > Integration into cable TV network via the InfoChannel
- > Network capability
- > Possibility to make changes in real-time to programs that are running
- > Control and content updates via the Internet
- > Option of integrating TV tuner cards
- > Display interactive content

- › **Integration of all the feratel/sitour content (live panorama pictures, weather data, weather forecasts, PanoramaMap, CPS, open/closed ski runs ...)**
- › **Hardware and software for split screen systems**
- › **Integration into the cable TV network via the InfoChannel**
- › **Personal on-site consultation**
- › **Full service support**
